SolidView 2014.0 Release Notes

SolidView 2014.0 provides improved program reliability, and it also comes with the following new features and enhancements:

- Support for new CAD Format Versions:
    - ACIS R24
    - Catia V5 V6R2013
    - Catia V6 support
    - Inventor 2014
    - Parasolid v26
    - SolidEdge ST6
    - SolidWorks 2014
    - Unigraphics NX9 support
- Ability to minimize To Tray
- Resolved conflicts between a SolidView CatiaV5 Interface Installation and a Catia System Installation
- OBJ File Reader Interface
- AMF (Additive Manufacturing Format) File Reader Interface
- Other enhancements and bug fixes

Downloading and Auto Updating

SolidView 2014 can be obtained from SolidView's website (login required): *www.solidview.com/Support/Download*

Another upgrade option is through the SolidView help menu > Help[?] | Web | Check for updates

Installing, Uninstalling, and Upgrade Notes

During your installation you can choose between TYPICAL or CUSTOM installation types*:

COMPLETE installation installs all CAD interfaces (only purchased interfaces are useable). Please note that Catia V5 interface requires a separate download and install

CUSTOM installation allows you to choose which CAD interfaces to install

Applies to SolidView/Pro and SolidView/Pro RP versions only; SolidView/Lite and SolidView do not have optional CAD interfaces available

Bug Fixes:

3993/3996 – Measure angle sometimes displays the compliment
3977 – Add a Face Count calculation to measure object
3972 – Improved pick resolution
3976 – Measure Section does not work for entire part extents (stops just before end)
3970 – View Rotation and View Pan does not work if immediately performed after zooming in/out on part
